### Description of Module / Aims

This module looks at the lighting and rendering components of the 3D digital animation pipeline. The module will encompass materials editing, lighting and shadows, and rendering using an industry-standard rendering engine. Students will have the opportunity to explore advanced techniques and effects that may be used to light and render complex 3D scenes and, using pre-existing scene assets, and to produce a photo-realistic and production-quality rendered scene.

### Programmes

|            |                                                                |           |
|------------|----------------------------------------------------------------|-----------|
| COMP -0631 | BSc (Hons) in Creative Computing (WD_KCRC0_B)                  | 4 / 7 / E |
| COMP -0631 | BSc (Hons) in Multimedia Applications Development (WD_KMULM_B) | 4 / 1 / E |

### Indicative Content

- Principles of light and colour
- Materials and Maps
- 3D lighting including standard, photometric, and HDRI lighting
- Shadows
- Rendering including indirect and global illumination
- Effects including lens and camera shaders

### Learning Outcomes

*On successful completion of this module, a student will be able to:*

1. Appraise approaches to managing and creating materials used in 3D rendering.
2. Compare standard, photometric and HDRI lighting assemblies.
3. Evaluate, in terms of optimisation, techniques used to render shadows in 3D animation.
4. Create camera and lens effects in a pre-existing 3D scene.
5. Integrate lighting and rendering techniques to manage the production of a short animated scene.

### Learning and Teaching Methods

- Interactive and open-forum lectures.
- Class discussions and presentations.
- Problem-based learning activities.
- Self-directed learning.

## Assessment Methods

|                       | Weighing | Outcomes Assessed |
|-----------------------|----------|-------------------|
| Continuous Assessment | 100%     | 1,2,3,4,5         |
| <i>Assignment</i>     | 40%      | 1,2,3             |
| <i>Project</i>        | 60%      | 3,4,5             |

## Assessment Criteria

**<40%:** Unable to interpret and describe key concepts of the specific knowledge domain(s).

**40%-49%:** Be able to interpret and describe key concepts of the specific knowledge domain(s).

**50%-59%:** Ability to discuss key concepts of the specific knowledge domain and ability to discover and integrate related knowledge in other knowledge domains.

**60%-69%:** Be able to solve problems within the specific knowledge domain(s) by experimenting with the appropriate skills and tools.

**70%-100%:** All the above to an excellent level. Be able to analyse and design solutions to a high standard for a range of both complex and unforeseen problems through the use and modification of appropriate skills and tools.

## Learning Modes

| Learning Mode        | F/T Hours | P/T Hours |
|----------------------|-----------|-----------|
| Lecture              | 12        |           |
| Practical            | 36        |           |
| Independent Learning | 87        |           |

## Essential Material

- Lanier, J. \_Advanced Maya Texturing and Lighting\_. New York: Sybex, 2015.

## Supplementary Material

- Palamar, T. \_Mastering Autodesk Maya\_. New York: Sybex, 2016.
