Artificial Intelligence (A14322)

Short Title:	Artificial Intelligence	
Faculty	Science and Computing	
Department	Computing and Mathematics	
Cluster	Software and Web Development	
Author	PCAREW	
Credits	5	Level: Advanced

Description of Module / Aims

The purpose of this module is to introduce the student to the fundamental concepts of Artificial Intelligence. The student will be introduced to symbolic A.I., knowledge representation, search techniques and an A.I. programming paradigm.

Programmes

COMP -0215	BSc (Hons) in Applied Computing (International) (WD_KACMI_B)	4 / 8 / E
COMP -0215	BSc (Hons) in Applied Computing (WD_KACCM_B)	4 / 8 / E
COMP -0215	BSc (Hons) in Applied Computing (WD_KCOMP_B)	4 / 8 / E
COMP -0215	BSc (Hons) in Computer Forensics and Security (WD_KCOFO_B)	4 / 8 / E
COMP -0215	BSc (Hons) in Computer Science (WD_KCMSC_B)	4 / 8 / E
COMP -0215	BSc (Hons) in Software Systems Development (WD_KDEVP_B)	4 / 8 / E

Indicative Content

- History of A.I: Introduction to problem characteristics; Historical and contemporary applications
- Knowledge representation techniques: Trees; Productions; Frames; Semantic networks; Predicate calculus and theorem proving
- Search: Un-informed; Bi-directional; Heuristic; Constraint based; Application domains
- A.I. architectures: Planning and case based reasoning; Production systems; Rule based systems; Agent, reactive and blackboard systems; Non-monotonic systems; Neural networks; Natural language systems
- Practical Programme: The student will be exposed to A.I. problems in practical sessions using an A.I. language such as Prolog

Learning Outcomes

On successful completion of this module, a student will be able to:

1. Appraise various knowledge representation techniques.
2. infer using the rules of logic as applied in predicate calculus.
3. Appraise different heuristic search techniques and their applications.
4. Construct programs in an Artificial Intelligence based language.

Learning and Teaching Methods

- This module will be presented by a combination of lectures and computer-based practical.
- The lectures will be used to introduce new topics and their related concepts.
- The practical element is intended to provide the student with the necessary skills to represent and solve A.I. problems using a suitable programming language.
- Student will be expected to read ahead on lecture content.

- Student will be expected to complement lecture content with self-learning.
- Student will be expected to develop skills to solve problems using A.I. language in practicals.

Assessment Methods

	Weighing	Outcomes Assessed
Final Written Examination	100%	1,2,3,4

Assessment Criteria

- <40%:** Unable to explain the principles of AI techniques for solving simple problems.
- 40%-49%:** Able to explain the principles of AI techniques for solving simple problems.
- 50%-59%:** Able to explain and apply AI techniques for solving problems.
- 60%-69%:** Able to explain, choose and apply AI techniques for solving complex problems.
- 70%-100%:** Able to critically choose, adapt and apply complex AI techniques for solving complex problems.

Learning Modes

Learning Mode	F/T Hours	P/T Hours
Lecture	24	
Practical	24	
Independent Learning	87
